### **CECT STUDY OF FACE AND NECK**

- A mildly enhancing soft tissue space occupying lesion is seen involving left upper alveolus, adjacent part of hard palate and floor of left maxillary sinus with bony erosion. Upper gingivo-buccal sulcus is involved. Medial pterygoid muscle is involved. This space occupying lesion measures 24 x 22 x 34mm in size.
- The nasopharynx is seen normally. No obvious mass lesion is seen. No mass lesion is seen in the parapharyngeal region.
- Bilateral submandibular and parotid glands are seen normally.
- The aryepiglottic folds and epiglottis are seen normally.
- The valleculae and pyriform sinuses are seen normally.
- The laryngeal airway and cartilages are seen normally.
- Subcentimeteric upper cervical lymphnode is seen in left submandibular region [SAD<10mm].
- The great vessels of neck are seen normally with maintained fascial planes.
- Cervical vertebral bodies show osteophytes. No evidence of any lytic or sclerotic area is seen.
- No abnormal paraspinal soft tissue shadow is seen.
- Thyroid gland is normal in size and density.
- Bilateral maxillary sinuses show mucosal thickening.

#### **IMPRESSION:**

- **MILDLY ENHANCING SOFT TISSUE SPACE OCCUPYING LESION INVOLVING LEFT UPPER ALVEOLUS, HARD PALATE AND FLOOR OF LEFT MAXILLARY SINUS WITH BONY EROSION AS DESCRIBED — MALIGNANT GROWTH.**

**Clinical correlation is necessary.**
