## **MRI: DORSO-LUMBAR SPINE**

### **IMAGING SEQUENCES (NCMR)**

**AXIAL:** T1 & TSE T2 Wis. **SAGITTAL:** T1 & TSE T2 Wis. **CORONAL:** T2 Wis.

Dorso-lumbar spinal curvature is straightened. Vertebral bodies are showing normal height, alignment and marrow signal intensity pattern.

Mild posterior disc bulge is seen at D3-4 level causing mild indentation over thecal sac without significant compromise of lateral recess and neural foramina (AP thecal sac diameter 11.5mm).

Rest of the intervertebral discs and neural foramina are showing normal MR morphology and signal intensity pattern. No significant disc bulge/herniation or compression over thecal sac/spinal cord is seen at other levels.

Rest of the thecal sac with spinal cord including conus medullaris is normally visualized.

Facet joints and ligamentum flavum are normal.

Pre and para vertebral soft tissues are normal.

Bilateral sacroiliac joints are normally visualized.

Screening of rest of the spine was done which reveals small disc bulge at C4-5 level.

### **IMPRESSION:**

- **Mild disc bulge at D3-4 level.**

Please correlate clinically.

**DR. RAVENDRA SINGH**
