NCCT STUDY OF PARANASAL SINUSES

- **Mild mucosal thicken is seen involving bilateral maxillary and Ethmoid sinuses causing partial occlusion of right osteomeatal complex, bilateral sphenoid recesses and complete occlusion of left osteomeatal complex.**
- **Minimal mucosal thickening is seen in bilateral frontal and sphenoid sinuses.**
- **Nasal septum is minimally deviated towards right side.**
- **Mild mucosal thickening is seen involving bilateral nasal turbinates.**
- No mass lesion is seen in nasopharynx or nasal cavity.

IMPRESSION:

- **BILATERAL MAXILLARY AND ETHMOID SINUSITIS.**
- **MINIMALLY DEVIATED NASAL SEPTUM.**
- **MINIMAL MUCOSAL THICKENING IN BILATERAL FRONTAL AND SPHENOID SINUSES.**
- **MILD MUCOSAL THICKENING OF BILATERAL NASAL TURBINATES.**

Clinical correlation is necessary.
