

Patient Name : Mrs. INDU DEVI Visit No : CHA250033859
Age/Gender : 68 Y/F Registration ON : 25/Feb/2025 11:15AM
Lab No : 10131155 Sample Collected ON : 25/Feb/2025 11:15AM
Referred By : Dr.VS NEGI Sample Received ON :
Refer Lab/Hosp : CGHS (BILLING) Report Generated ON : 25/Feb/2025 07:10PM

MRI: LUMBO-SACRAL SPINE

IMAGING SEQUENCES (NCMR)

AXIAL: T1 & TSE T2 Wis. **SAGITTAL:** T1 & TSE T2 Wis **CORONAL:** T2

Lumbar spine is straightened with loss of usual spinal curvature. There is evidence of degenerative changes affecting lumbar spine. All the intervertebral discs are desiccated. Vertebrae are also showing degenerative changes in form of anterior osteophytosis and signal changes adjacent to end plates.

Diffuse disc bulges are seen at L3-4, L4-5 & L5-S1 levels producing mild compromise of bilateral lateral recesses with mild extradural compression over thecal sac (AP thecal sac diameter 11.5mm, 9.4mm & 9.8mm respectively).

Rest of the vertebrae and intervertebral disc are showing normal height, morphology, outline, alignment and signal intensity. No significant disc bulge/herniation or compression over thecal sac/nerve roots at any other level.

Lower dorsal spinal cord and conus medullaris are showing normal morphology, outline and signal intensity.

Facet joints and ligamentum flavum are normal.

Pre and para vertebral soft tissues are normal.

Bilateral sacroiliac joints appear normal in the visualized sections.

Screening of rest of the spine was done which reveals degenerative changes with small disc bulge at C5-6 level.

IMPRESSION

Degenerative changes affecting lumbar spine with disc bulges at L3-4, L4-5 & L5-S1 levels.

Please correlate clinically.
