CT CORONARY ANGIOGRAPHY

Compromised assessment due to respiratory motion artifacts (patient was unable to hold breath adequately)

Calcium Score:

VESSEL	LMCA	LAD	LCX	RCA	TOTAL
AGATSTON SCORE	0	0	0	0	0

Aorta shows tricuspid aortic valve with few mixed density plaques in visualized parts.

Left main coronary artery shows origin from left posterior aortic sinus with trifurcation into left anterior descending artery and left circumflex artery. No obvious calcified / non-calcified plaques are seen in left main coronary artery.

Left anterior descending artery shows no obvious calcified / non-calcified plaque. Distal opacification appears maintained.

Ramus Intermedius is absent.

Left circumflex artery appears attenuated in caliber beyond origin of OM2 branch - normal variant in right dominant circulation. Rest of the left circumflex artery shows no obvious calcified / non-calcified plaque.

Right coronary artery shows origin from anterior aortic sinus. No obvious calcified / non-calcified plaques are seen in right coronary artery. Distal opacification appears maintained.

Dominant circulation: Right sided.

IMPRESSION: - CORONARY ANGIOGRAM SHOWS -

- RIGHT DOMINANT CIRCULATION.
- NO OBVIOUS CALCIFIED OR SOFT PLAQUE IN CORONARY ARTERIES

Clinical correlation is necessary.
