Test Name	Result	Unit	Bio. Ref. Range	Method
RF FACTOR				
RHEUMATOID FACTOR	9.70	IU/ml	0 - 14	_

SUMMARY: Rheumatoid factors (RF) group of autoantibodies belonging to all immunoglobulin classes directed against the FC fragment of altered or complexed Igg. Diagnostic test for RF determination identify mainly RF of the IgM class which are detectable in several rheumatic diseases, mainly of inflammatory origin.

RF occur in approx 70 -80 % of patients with rheumatoid arthritis (RA), but they are not specific for RA as elevated concentrations are also observed in various non rheumatic disease & in approx 10 % of the elederly population without clinical symptoms of RA. High RF concentrations in RA are often associated with a more progressive clinical course of the disease .However, a positive RF value has to be confirmed by clinical & other laboratory findings.

Test Name	Result	Unit	Bio. Ref. Range	Method
CRP-QUANTITATIVE				
CRP-QUANTITATIVE TEST	0.167	MG/L	0.1 - 6	

Method: Immunoturbidimetric

PR.

(Method: Immunoturbidimetric on photometry system)

SUMMARY: C - reactive protien (CRP) is the best known among the acute phase protiens, a group of protien whose concentration increases in blood as a response to inflammatory disorders.CRP is normally present in low concentration in blood of healthy individuals (< 1mg/L). It is elevated up to 500 mg/L in acute inflammatory processes associated with bacterial infections, post operative conditions tissue damage already after 6 hours reaching a peak at 48 hours.. The measurment of CRP represents a useful aboratory test for detection of acute infection as well as for monitoring inflammtory proceses also in acute rheumatic & gastrointestinal disease. In recent studies it has been shows that in apparrently healthy subjects there is a direct orrelation between CRP concentrations & the risk of developing oronary heart disease (CHD).

hsCRP cut off for risk assessment as per CDC/AHA

Level Risk <1.0 Low 1 0-3 0 Average >3.0 High

All reports to be clinically corelated

URIC ACID		HAR	AAA	
Sample Type : SERUM				
SERUM URIC ACID	4.1	mg/dL	2.40 - 5.70	Uricase,Colorimetric

SKIAGRAM CERVICAL SPINE AP AND LATERAL VIEW

- Shape and size of bodies of cervical vertebrae are normal.
- Intervertebral disc spaces are maintained.
- Posterior elements are seen normally.
- No cervical rib is seen.
- No CVJ anomaly is seen.

Clinical correlation is necessary.
