X-RAY MAMMOGRAPHY RIGHT BREAST

ACR grading B homogeneously dense breast parenchyma

RIGHT BREAST

- There is no evidence of any abnormal rounded radio-opaque shadow in the breast parenchyma.
- Rest of right breast show homogeneous fibro-fatty parenchyma.
- There are no micro-calcifications seen.
- There is no retraction of nipple seen.
- No thickening of the skin is seen.
- There is no evidence of axillary lymphnodes seen.
- **ON USG Correlation: Fibro-glandular parenchyma appears dense and heteroechoic in echotexture with multiple cysts, largest measuring approx 11 x 7.3 mm in right breast – s/o fibrocystic breast disease (birads II category).**

Note:

- Sensitivity of mammography is decreased in breast have dense parenchyma.
- Screening of mammography is advisable for all women above the age of 40 years.
- Sonomammography (ultrasound) is helpful for accurate diagnosis of disease of breast epically in dens breast. Detailed Sonomammography is advisable if clinically indicated.

Clinical correlation is necessary.
