## ECG REPORT

* RATE	: 78 bpm			
* RHYTHM	: Irregular			
* P wave				
* PR interval	:			
* QRS Axis	: Normal			
Duration	: Normal			
Configuration	: Normal			
* ST-T Changes	: Secondary ST -T Changes			
* QT interval				
* QTc interval	: Sec.			
* Other				
OPINION: ATRIAL FIBRILLATION				
(Finding to be correlated clinically)

## **ULTRASOUND STUDY OF WHOLE ABDOMEN**

### <u>Compromised scan due to gaseous abdomen & patient fatty body habitus.</u>

- <u>Liver</u> is mildly enlarged in size measures 157 mm and shows increased echotexture of liver parenchyma. No intrahepatic biliary radicle dilatation is seen. No space occupying lesion is seen. Hepatic veins and IVC are seen normally.
- <u>Gall bladder</u> is normal in size and **shows few small calculi in lumen**, **size upto 6 mm with sludge**. No mass lesion is seen. GB walls are not thickened.
- <u>CBD</u> is normal at porta. No obstructive lesion is seen.
- **<u>Portal vein</u>** Portal vein is normal at porta.
- **<u>Pancreas</u>** is normal in size and shows homogenous echotexture of parenchyma. PD is not dilated. No parenchymal calcification is seen. No peripancreatic collection is seen.
- **Spleen** is normal in size and shows homogenous echotexture of parenchyma. No SOL is seen.
- No retroperitoneal adenopathy is seen.
- No ascites is seen.

ЪR

- <u>Right kidney</u> is normal in size and position. Renal parenchymal echogenicity is increased (grade I / II) with partially maintained cortico-medullary differentiation. No hydronephrosis is seen. No calculus or mass lesion is seen. Parenchymal thickness is normal. No scarring is seen. Right kidney measures 86 x 45 mm in size.
- <u>Left kidney</u> is normal in size and position. **Renal parenchymal echogenicity is increased (grade III) with loss of cortico-medullary differentiation**. No hydronephrosis is seen. No calculus or mass lesion is seen. Parenchymal thickness is normal. No scarring is seen. Left kidney measures 80 x 34 mm in size.
- **<u>Ureters</u>** Both ureters are not dilated. UVJ are seen normally.
- <u>Urinary bladder</u> is normal in contour with anechoic lumen. No calculus or mass lesion is seen. UB walls are not thickened.
- Uterus & ovaries are atrophic (post menopausal).
- No adnexal mass lesion is seen.
- No free fluid is seen in Cul-de-Sac.

### **OPINION:**

- Mild hepatomegaly with fatty infiltration of liver grade-I.
- Cholelithiasis with GB sludge.
- Bilateral medical renal disease (Left >> Right).

### Clinical correlation is necessary.

(DR. R.K. SINGH, MD)

#### SKIAGRAM CHEST PA VIEW

- Broncho vascular markings are prominent in bilateral parahilar region.
- Bilateral hilar shadows are prominent.
- Cardiomegaly is present.
- Both CP angles are clear.
- Soft tissue and bony cage are seen normally.
- Both domes of diaphragm are sharply defined.

### Clinical correlation and Cardiac evaluation is needed.
