EEG EXAMINATION REPORT

- This 24 channel Awake EEG record done under 10-20 international system of electrode placement shows organized background rhythm of 08 Hz, 40 to 80 mV in occipital leads.
- There is no significant left asymmetry.
- There is no significant right asymmetry.
- No epileptiform discharges seen.

OPINION :

NORMAL EEG RECORD.

ADVISED : CLINICAL CORRELATION.

MRI: BRAIN

IMAGING SEQUENCES (NCMR)

AXIAL: SWI, DWI, T1, FLAIR & TSE T2 Wis. **SAGITTAL:** T2 Wis. **CORONAL:** FLAIR Wis.

Multiple small T2/TIRM hyperintensities are seen in bilateral fronto-parietal periventricular and subcortical white matter — suggestive of microangiopathic ischemic changes. No fresh infarct is seen on DWI.

Lateral and third ventricles are prominent.

Rest of the cerebral hemispheres shows normal MR morphology, signal intensity and gray - white matter differentiation. The basal nuclei, thalami and corpus callosum are showing normal signal intensity pattern. Septum pellucidum and falx cerebri are in midline. No mass effect or midline shift is seen. Supratentorial sulcal and cisternal spaces are normally visualized.

Brain stem and cerebellar hemispheres are showing normal morphology, signal intensity and outline. Fourth ventricle is normal in size and midline in position.

Major intracranial dural venous sinuses are showing normal outline and flow void.

Partial empty sella is seen. Supra-sellar and para-sellar structures are normally visualized.

IMPRESSION:

- **Microangiopathic ischemic changes in bilateral fronto-parietal periventricular and subcortical white matter.**
- **Partial empty sella.**

Please correlate clinically.
