ULTRASOUND STUDY OF WHOLE ABDOMEN

- **Liver** is mildly enlarged in size (~ 154 mm), and shows increased echotexture of liver parenchyma. No intrahepatic biliary radicle dilatation is seen. No space occupying lesion is seen. Hepatic veins and IVC are seen normally.
- **Gall bladder** is normal in size and shows anechoic lumen. No calculus / mass lesion is seen. GB walls are not thickened
- **CBD** is normal at porta. No obstructive lesion is seen.
- **Portal vein** Portal vein is normal at porta.
- **Pancreas** is normal in size and shows homogenous echotexture of parenchyma. PD is not dilated. No parenchymal calcification is seen. No peripancreatic collection is seen.
- **Spleen** is normal in size and shows homogenous echotexture of parenchyma. No SOL is seen.
- No retroperitoneal adenopathy is seen.
- No ascites is seen.
- **Both kidneys** are normal in size and position. Minimal hydronephrosis is seen on left side. Two calculi are seen, measures ~ 4.1mm, 4.6mm at mid pole of left kidney. No mass lesion is seen. Cortico-medullary differentiation is well maintained. Parenchymal thickness is normal. No scarring is seen. Right kidney measures 81 x 39 mm in size. Left kidney measures 102 x 43 mm in size.
- **Ureters** left distal ureter is minimally dilated and shows calculus measures ~ 5.3 mm near VUJ. Right ureter is not dilated.
- **Urinary bladder** is partially distended with anechoic lumen. No calculus or mass lesion is seen. UB walls are not thickened.
- **Uterus** is not visualized -- post operative.

OPINION:

- **Mild hepatomegaly with fatty infiltration of liver grade-I.**
- **Left renal calculi with left distal ureteric calculus near VUJ causing minimal hydroureteronephrosis.**

Clinical correlation is necessary.

[DR. R. K. SINGH, MD]
