**HIGH RESOLUTION ULTRASOUND STUDY OF BOTH BREASTS**  
**Study performed with 10.0MHz high frequency linear probe.**

- **Right breast** A well defined rounded anechoic cystic lesion of size 4 x 3 mm is seen at 12 o' clock position. Fibroglandular parenchyma appear dense and echogenic and is heteroechoic in echotexture in upper inner quadrant involving 12-1-2 o' clock position. Rest of the breast architecture on right side shows homogeneous echotexture of parenchyma. Normal nipple areola complex is seen.
- **Left breast** A well defined rounded hypoechoic lesion of size 15 x 10 mm is seen at 12-1 o' clock position with cystic component within. Rest of the breast architecture on left side shows homogeneous echotexture of parenchyma. Normal nipple areola complex is seen.
- **Few lactiferous ducts are prominent on both side.**
- **Axillary tail is normal. Multiple lymphnodes are noted in bilateral axilla, largest of size 16 x 16 mm in right axilla and 14 x 6 mm in left axilla.**

**IMPRESSION:**

- **RIGHT BREAST – SIMPLE CYST WITH DENSE AND ECHOGENIC WITH HETEROECHOIC IN ECHOTEXTURE IN FIBROGLANDULAR PARENCHYMA (BIRADS – III CATEGORY).**
- **LEFT BREAST - A WELL DEFINED ROUNDED HYPOECHOIC LESION AT 12-1 O' CLOCK POSITION WITH CYSTIC COMPONENT (BIRADS – III CATEGORY).**
- **BILATERAL SIGNIFICANT AXILLARY LYMPHADENOPATHY.**

**ADV : MRI BREAST FOR FURTHER EVALUATION IF CLINICALLY INDICATED & HISTOPATHOLOGICAL CORRELATION.**

**Clinical correlation is necessary.**

**DR. NISMA WAHEED  
MD, RADIODIAGNOSIS**
