MRI: BRAIN

IMAGING SEQUENCES (NCMR)

AXIAL: SWI, DWI, T1, FLAIR & TSE T2 Wis. **SAGITTAL:** T2 Wis. **CORONAL:** FLAIR Wis.

Small hemorrhagic contusions with mild to moderate perifocal edema are seen in bilateral frontal and anterior temporal lobes.

Tiny T2/TIRM hyperintensity showing restriction on DWI is noted in left occipital lobe — acute lacunar infarct.

Focal subarachnoid hemorrhage is seen in right parietal lobe.

Rest of the cerebral hemispheres show normal MR morphology, signal intensity and gray - white matter differentiation. The basal nuclei, thalami and corpus callosum are showing normal signal intensity pattern. Both lateral ventricles and third ventricle are normal in size shape and outline. Septum pellucidum and falx cerebri are in midline. No mass effect or midline shift is seen.

Brain stem and cerebellar hemispheres are showing normal morphology, signal intensity and outline. Fourth ventricle is normal in size and midline in position.

Major intracranial dural venous sinuses are showing normal outline and flow void.

Sella, supra-sellar and para-sellar structures are normally visualized.

Screening of cervical spine was done which reveals small disc bulge at C5-6 level.

IMPRESSION:

Alleged history of trauma.

- **Small hemorrhagic contusions with mild to moderate perifocal edema in bilateral frontal and anterior temporal lobes.**
- **Acute lacunar infarct in left occipital lobe.**
- **Focal subarachnoid hemorrhage in right parietal lobe.**

NOT FOR MEDICO-LEGAL PURPOSE.

Please correlate clinically.
