**HIGH RESOLUTION ULTRASOUND STUDY OF RIGHT BREAST**  
**Study performed with 10.0MHz high frequency linear probe.**

- **Right breast** An ill defined irregular heteroechoic predominantly hypoechoic lesion measuring approx. 33 x 24 x 30 mm is noted at 11 o' clock position in mammary zone. On color Doppler study shows mild vascularity within the lesion. Another small well defined rounded hypoechoic lesion of size 5 x 4 x 5 mm is seen in subareolar region. Rest of the breast architecture on right side shows homogeneous echotexture of parenchyma. Normal nipple areola complex is seen.
- No abnormal calcification is seen.
- No abnormal ductal dilatation is seen.
- Axillary tail is normal. No obvious axillary lymphadenopathy is seen.
- **A tubular anechoic linear structure is noted in upper inner quadrant of right breast - ? Thrombopheblitis.**

**IMPRESSION:**

- **RIGHT BREAST - AN ILL DEFINED IRREGULAR HETEROECHOIC PREDOMINANTLY HYPOECHOIC LESION AT 11 O' CLOCK POSITION IN MAMMARY ZONE WITH MILD VASCULARITY - ? NEOPLASTIC ETIOLOGY (BIRADS V CATEGORY). NEEDS HISTOPATHOLOGICAL CORRELATION.**
- **SMALL WELL DEFINED ROUNDED HYPOECHOIC LESION IN SUBAREOLAR REGION.**
- **TUBULAR ANECHOIC LINEAR STRUCTURE IN UPPER INNER QUADRANT OF RIGHT BREAST - ? THROMBOPHEBLITIS.**

**Clinical correlation is necessary.**

**DR. NISMA WAHEED**  
**MD, RADIODIAGNOSIS**
