

Patient Name : Ms.DURGESH AGARWAL	Visit No : CHA250037740
Age/Gender : 41 Y/F	Registration ON : 02/Mar/2025 02: 15PM
Lab No : 10135035	Sample Collected ON : 02/Mar/2025 02: 20PM
Referred By : Dr.RAJIV RASTOGI	Sample Received ON : 02/Mar/2025 02: 25PM
Refer Lab/Hosp : CHARAK NA	Report Generated ON : 02/Mar/2025 03: 10PM
Doctor Advice : TROPONIN-T hs Stat	

Test Name	Result	Unit	Bio. Ref. Range	Method
TROPONIN-T hs Stat				
TROPONIN-T	0.005	ng/ml	< 0.010	

NOTES :-

Troponin T hs is a member of the myofibrillar proteins of striated muscularis. These myofibrillar proteins are the building blocks of the contractile apparatus. Troponin T hs binds the troponin complex to tropomyosin and binds the neighboring tropomyosin molecules. The determination of troponin T in serum plays an important role in the diagnosis of myocardial infarction(AMI),microinfarction (minor myocardial damage - MMO) and myocarditis.Troponin T is detectable about 3 -4 hours after the occurrence of cardiac symptoms .Following acute myocardial ischemia ,Troponin T remains in the serum for a lengthy period of time and can hence help to detect myocardial events that have occurred upto 14 days earlier.

Cobas E 411 Troponin T hs Stat employs monoclonal antibodies specifically directed against human cardiac Troponin T (after release from the free cytosol and myofibrils .)

Based on the WHO criteria for the definition of AMI from the 1970~s the cutoff (clinical discriminator) value for troponin T is 0.1 ng/ml according to ROC analysis.

Elevated Troponin T values are occasionally found in patients with restricted renal function despite the absence of definite evidence of myocardial Ischemia.

(ELECTRO-CHEMILUMINESCENCE TECHNIQUE BY Cobas E 411)
