## **X-RAY MAMMOGRAPHY LEFT BREAST**

### **ACR grading C heterogeneously dense breast parenchyma**

- There is no evidence of any abnormal rounded radio-opaque shadow in the left breast parenchyma.
- **Left breast shows heterogeneously dense fibro-fatty parenchyma.**
- There are no micro-calcifications seen.
- There is no retraction of nipple seen.
- No thickening of the skin is seen.
- There is no evidence of axillary lymphnodes seen.

### **ON USG CORERLATION :**

- **Fibroglandular parenchyma appear heteroechoic in echotexture predominantly at 12 o' clock position in left breast – s/o Fibroadenosis changes (Birads – II Category).**

### **Note:**

- Sensitivity of mammography is decreased in breast have dense parenchyma.
- Screening of mammography is advisable for all women above the age of 40 years.
- Sonomammography (ultrasound) is helpful for accurate diagnosis of disease of breast epically in dens breast. Detailed Sonomammography is advisable if clinically indicated.

**Clinical correlation is necessary.**
