## MRI: BRAIN

### IMAGING SEQUENCES (NCMR)

**AXIAL:** SWI, DWI, T1, FLAIR & TSE T2 Wis. **SAGITTAL:** T2 Wis. **CORONAL:** FLAIR Wis.

A tiny T2 hypointense nodule showing blooming on SWI is seen in left occipital lobe. No perifocal edema is noted.

Rest of the cerebral hemispheres show normal MR morphology, signal intensity and gray - white matter differentiation. The basal nuclei, thalami and corpus callosum are showing normal signal intensity pattern. Both lateral ventricles and third ventricle are normal in size shape and outline. Septum pellucidum and falx cerebri are in midline. No mass effect or midline shift is seen. Supratentorial sulcal and cisternal spaces are normally visualized.

Brain stem and cerebellar hemispheres are showing normal morphology, signal intensity and outline. Fourth ventricle is normal in size and midline in position.

Major intracranial dural venous sinuses are showing normal outline and flow void.

Partial empty sella is noted. Supra-sellar and para-sellar structures are normally visualized.

### IMPRESSION:

- **Tiny calcified nodule in left occipital lobe without perifocal edema -- ? calcified inflammatory granuloma.**

*Please correlate clinically.*
