

Patient Name	: Mr. VIKAS	Visit No	: CHA250038183
Age/Gender	: 25 Y/M	Registration ON	: 03/Mar/2025 01:11PM
Lab No	: 10135478	Sample Collected ON	: 03/Mar/2025 01:11PM
Referred By	: Dr. RBH	Sample Received ON	:
Refer Lab/Hosp	: CHARAK NA	Report Generated ON	: 03/Mar/2025 04:58PM

MRI: BRAIN

IMAGING SEQUENCES (NCMR)

AXIAL: SWI, DWI, T1, FLAIR & TSE T2 Wis. **SAGITTAL:** T2 Wis. **CORONAL:** FLAIR Wis.

Few hemorrhagic contusions are seen in left fronto-temporal lobes, largest measuring approx 25 x 13 mm in left anterior temporal lobe. Mild to moderate perifocal edema is noted. Mild mass effect is seen with effacement of adjacent underlying cortical sulci and midline shift approx 1.7 mm towards right side.

Multiple petechial hemorrhages are seen in left frontal and bilateral temporal lobes.

Rest of the cerebral hemispheres show normal MR morphology, signal intensity and gray - white matter differentiation. The basal nuclei, thalami and corpus callosum are showing normal signal intensity pattern. Both lateral ventricles and third ventricle are normal in size shape and outline.

Brain stem and cerebellar hemispheres are showing normal morphology, signal intensity and outline. Fourth ventricle is normal in size and midline in position.

Major intracranial dural venous sinuses are showing normal outline and flow void.

Sella, supra-sellar and para-sellar structures are normally visualized.

Screening of cervical spine was done which reveals no significant abnormality.

IMPRESSION:

Alleged history of trauma showing :

- **Few hemorrhagic contusions in left fronto-temporal lobes with perifocal edema and mild mass effect as described.**
- **Multiple petechial hemorrhages in left frontal and bilateral temporal lobes.**

NOT FOR MEDICO-LEGAL PURPOSE

Please correlate clinically.
