Doctor Advice	: ACE (Angiotensin Converting enzyme)		

Test Name	Result	Unit	Bio. Ref. Range	Method
ACE (Angiotensin Converting enzyme)				
Angiotensin Converting Enzyme (ACE)	80.00	U/L	8.0 - 68.0	FAPGG

Angiotensin converting enzyme (ACE) is a glycoprotein peptidyl dipeptide hydrolase that cleaves histidylleucine dipeptide from angiotensin I, a relatively inactive decapeptide. The latter is converted to the potent vasoconstrictor, angiotensin II. ACE also inactivates bradykinin.

Elevated levels of ACE activity occur in serum of patients with active sarcoidosis, and occasionally in premature infants with respiratory distress syndrome, in adults with tuberculosis, Gaucher's disease, leprosy, and in many other pathologic conditions involving lung and liver diseases.

ACE will be higher when the age is below 18
