Vertebral bodies are showing normal height, alignment, curvature and marrow signal intensity pattern. No obvious inflammatory/infective pathology is observed.

Intervertebral discs & neural foramina show normal MR morphology and signal intensity pattern. No significant disc bulge / herniation or compression over thecal sac / spinal cord is seen.

Facet joints and ligamentum flavum are normal.

Thecal sac with spinal cord including conus medullaris is normal in MR morphology and signal intensity. Cord - CSF interface is normally seen. No obvious intramedullary or intra/extradural pathology is seen.

Pre and para vertebral soft tissues are normal.
