

Patient Name	: Mr.ASHA RAM	Visit No	: CHA250038776
Age/Gender	: 31 Y/M	Registration ON	: 04/Mar/2025 10: 40AM
Lab No	: 10136071	Sample Collected ON	: 04/Mar/2025 10: 40AM
Referred By	: Dr.VINOD TIWARI	Sample Received ON	:
Refer Lab/Hosp	: CHARAK NA	Report Generated ON	: 04/Mar/2025 07: 16PM

MRI: LUMBO-SACRAL SPINE

IMAGING SEQUENCES (NCMR)

AXIAL: T1 & TSE T2 Wis. **SAGITTAL:** T1 & TSE T2 Wis **CORONAL:** T2

Lumbar spinal curvature is straightened. L5-S1 disc is desiccated. Vertebral bodies are showing normal height, alignment and marrow signal intensity pattern.

Mild retrolisthesis with posterior disc herniation (protrusion) is observed at L5-S1 level producing mild compromise of bilateral lateral recesses (L>R) with mild extradural compression over thecal sac (AP thecal sac diameter 10mm).

Rest of the intervertebral discs and neural foramina are showing normal MR morphology and signal intensity pattern. No significant disc bulge/herniation or compression over thecal sac/spinal cord is seen at other levels.

Rest of the thecal sac with spinal cord including conus medullaris are showing normal MR morphology and signal intensity pattern.

Facet joints and ligamentum flavum are normal.

Pre and para vertebral soft tissues are normal.

Bilateral sacroiliac joints appear normal in the visualized sections.

Screening of rest of the spine was done which reveals small disc bulges at C4-5, C5-6 & C6-7 levels.

IMPRESSION

Mild retrolisthesis-disc herniation at L5-S1 level.

Please correlate clinically.
