ULTRASOUND STUDY OF RIGHT LOWER BACK SWELLING

- A relatively well defined slightly lobulated heterogeneously hypoechoic lesion measuring approx. 84 x 38 x 61mm with volume of 68cc is seen within the soft tissue planes of back on right side in lumbar region. No obvious internal vascularity is seen on Doppler interrogation. Possibilities include:
 - Infective (collection).
 - Neoplastic.

Suggested: CEMRI and cytopathological correlation.

Clinical correlation is necessary.

[DR. JAYENDRA KR. ARYA, MD]
