X-RAY MAMMOGRAPHY LEFT BREAST

ACR grading B homogeneously dense breast parenchyma

- **A rounded radio-opaque shadow is noted in upper quadrant of left breast parenchyma.**
- **Rest of the left breast shows homogeneously dense fibro-fatty parenchyma.**
- There are no micro-calcifications seen.
- There is no retraction of nipple seen.
- No thickening of the skin is seen.
- There is no evidence of axillary lymphnodes seen.

ON USG CORERLATION :

- **A well defined rounded hypoechoic lesion of size 50 x 39 x 45 mm is seen at 12-1 o' clock position of left breast (BIRADS – III Category) (ADV : FNAC Correlation).**

Note:

- Sensitivity of mammography is decreased in breast have dense parenchyma.
- Screening of mammography is advisable for all women above the age of 40 years.
- Sonomammography (ultrasound) is helpful for accurate diagnosis of disease of breast epically in dens breast. Detailed Sonomammography is advisable if clinically indicated.

Clinical correlation is necessary.
