## MRI: BRAIN

### IMAGING SEQUENCES (NCMR)

**AXIAL:** SWI, DWI, T1, FLAIR & TSE T2 Wis. **SAGITTAL:** T2 Wis. **CORONAL:** FLAIR Wis.

Cerebral hemispheres show normal MR morphology, signal intensity and gray - white matter differentiation. The basal nuclei, thalami and corpus callosum are showing normal signal intensity pattern. Both lateral ventricles and third ventricle are normal in size shape and outline. Septum pellucidum and falx cerebri are in midline. No mass effect or midline shift is seen. Supratentorial sulcal and cisternal spaces are normally visualized.

Brain stem and cerebellar hemispheres are showing normal morphology, signal intensity and outline. Fourth ventricle is normal in size and midline in position.

No focal or diffuse area of altered signal intensity is seen. No obvious intra/extraxial space occupying lesion is observed.

Major intracranial dural venous sinuses are showing normal outline and flow void.

Sella, supra-sellar and para-sellar structures are normally visualized.

**Screening of cervical spine was done** which reveals small disc bulges at C4-5 and C6-7 levels, mildly indenting the thecal sac.

### IMPRESSION:

- **No obvious intracranial abnormality is detected.**

Please correlate clinically.
