ULTRASOUND STUDY OF WHOLE ABDOMEN

- **Liver** is mildly enlarged in size (~164mm) and shows increased echotexture of liver parenchyma. No intrahepatic biliary radicle dilatation is seen. No space occupying lesion is seen. Hepatic veins and IVC are seen normally.
- **Gall bladder** is normal in size and shows few (2 in no.) tiny echogenic foci in GB lumen measuring upto approx 4.6mm & 2.8mm. A well defined hypoechoic space occupying lesion of size approx 80 x 79mm is seen in GB fundal region infiltration to adjacent liver parenchyma - ? GB mass (? neoplastic etiology). GB walls are not thickened.
- **CBD** is normal at porta. No obstructive lesion is seen.
- **Portal vein** Portal vein is normal at porta.
- **Pancreas** is normal in size and shows homogenous echotexture of parenchyma. PD is not dilated. No parenchymal calcification is seen. No peripancreatic collection is seen.
- **Spleen** is borderline enlarged in size (~121mm) and shows homogenous echotexture of parenchyma. No SOL is seen.
- **Few subcentimeteric retroperitoneal / peri-portal lymphnodes are seen measuring upto approx 15 x 15mm with necrotic changes.**
- No ascites is seen.
- **Both kidneys** are normal in size and position. No hydronephrosis is seen. No calculus or mass lesion is seen. Cortico-medullary differentiation is well maintained. Parenchymal thickness is normal. No scarring is seen. Right kidney measures 99 x 41 mm in size. Left kidney measures 102 x 44 mm in size.
- **Ureters** Both ureters are not dilated. UVJ are seen normally.
- **Urinary bladder** is normal in contour with anechoic lumen. No calculus or mass lesion is seen. UB walls are not thickened.
- **Uterus** is normal in size, measures 58 x 30 x 23 mm and shows homogenous myometrial echotexture. Endometrial thickness measures 3.5 mm. No endometrial collection is seen. No mass lesion is seen.
- **Cervix** is normal.
- **Both ovaries** are normal in size and echotexture.
- No adnexal mass lesion is seen.
- No free fluid is seen in Cul-de-Sac.

OPINION:

- **MILD HEPATOMEGALY WITH FATTY INFILTRATION OF LIVER GRADE-I.**
- **TINY SOFT CALCULI / ORGANIZED SLUDGE IN GB WITH HYPOECHOIC SPACE OCCUPYING LESION IN GB FUNDAL REGION INFILTRATION TO ADJACENT LIVER PARENCHYMA - ? GB MASS (? NEOPLASTIC ETIOLOGY) ADV: FURTHER EVALUATION.**
- **BORDERLINE SPLENOMEGALY.**
- **FEW SUBCENTIMETERIC RETROPERITONEAL / PERI-PORTAL LYMPHNODES WITH NECROTIC CHANGES.**

Clinical correlation is necessary.

[DR. R. K. SINGH, MD]
