X-RAY MAMMOGRAPHY RIGHT BREAST

ACR grading C heterogeneously dense breast parenchyma

- **A small calcific focus is noted (benign).**
- Rest of right breast show heterogeneous fibro-fatty parenchyma.
- There is no retraction of nipple seen.
- No thickening of the skin is seen.
- There is no evidence of axillary lymphnodes seen.
- **On USG correlation: A well defined oval hypoechoic lesion measuring approx 11 x 6 mm is noted at 4 'o' clock position (Birads III category). Needs FNAC for further evaluation.**

Note:

- Sensitivity of mammography is decreased in breast have dense parenchyma.
- Screening of mammography is advisable for all women above the age of 40 years.
- Sonomammography (ultrasound) is helpful for accurate diagnosis of disease of breast especially in dense breast. Detailed Sonomammography is advisable if clinically indicated.

Clinical correlation is necessary.
