

Patient Name : Mr.ANIL KUMAR	Visit No : CHA250041149
Age/Gender : 45 Y/M	Registration ON : 07/Mar/2025 12:26PM
Lab No : 10138444	Sample Collected ON : 07/Mar/2025 12:28PM
Referred By : Dr.PREM HOSPITAL	Sample Received ON : 07/Mar/2025 12:32PM
Refer Lab/Hosp : CHARAK NA	Report Generated ON : 07/Mar/2025 01:20PM
Doctor Advice : AMYLASE,CHEST PA	

Test Name	Result	Unit	Bio. Ref. Range	Method
AMYLASE				
SERUM AMYLASE	125.7	U/L	20.0-80.00	Enzymatic

Comments:

Amylase is produced in the Pancreas and most of the elevation in serum is due to increased rate of Amylase entry into the blood stream / decreased rate of clearance or both. Serum Amylase rises within 6 to 48 hours of onset of Acute pancreatitis in 80% of patients, but is not proportional to the severity of the disease. Activity usually returns to normal in 3-5 days in patients with milder edematous form of the disease. Values persisting longer than this period suggest continuing necrosis of pancreas or Pseudocyst formation. Approximately 20% of patients with Pancreatitis have normal or near normal activity. Hyperlipemic patients with Pancreatitis also show spuriously normal Amylase levels due to suppression of Amylase activity by triglyceride. Low Amylase levels are seen in Chronic Pancreatitis, Congestive Heart failure, 2nd & 3rd trimesters of pregnancy, Gastrointestinal cancer & bone fractures.

SKIAGRAM CHEST PA VIEW

- Heterogenous radio opacities are seen in both lung fields with few fibrotic opacities.
- Ill defined opacity is seen in left infra clavicular region.
- Cardiac shadow is within normal limits.
- Both CP angles are clear.
- Soft tissue and bony cage are seen normally.
- Both domes of diaphragm are sharply outlined.

OPINION:

- **INFECTIVE --? KOCH'S CHEST.**
Adv: Sputum for AFB & Hematological examination.

To be correlated with previous records.
