ULTRASOUND STUDY OF WHOLE ABDOMEN

- **Liver** is mildly enlarged in size (~ 174 mm), and shows increased echotexture of liver parenchyma. No intrahepatic biliary radicle dilatation is seen. No space occupying lesion is seen. Hepatic veins and IVC are seen normally.
- **Gall bladder** is normal in size and shows anechoic lumen. No calculus / mass lesion is seen. GB walls are not thickened
- **CBD** is normal at porta. No obstructive lesion is seen.
- **Portal vein** Portal vein is normal at porta.
- **Pancreas** is normal in size and shows homogenous echotexture of parenchyma. PD is not dilated. No parenchymal calcification is seen. No peripancreatic collection is seen.
- **Spleen** is normal in size and shows homogenous echotexture of parenchyma. No SOL is seen.
- No retroperitoneal adenopathy is seen.
- No ascites is seen.
- **Right kidney** is small in size and normal in position. Renal parenchyma echogenicity is raised (grade-I) with just maintained cortico-medullary differentiation. No hydronephrosis is seen. No calculus or mass lesion is seen. Parenchymal thickness is normal. No scarring is seen. Right kidney measures 73 x 35 mm in size.
- **Left kidney** is normal in size and position. Renal parenchyma echogenicity is raised (grade-I) with just maintained cortico-medullary differentiation. No hydronephrosis is seen. No calculus or mass lesion is seen. Parenchymal thickness is normal. No scarring is seen. Left kidney measures 90 x 42 mm in size.
- **Ureters** Both ureters are not dilated. UVJ are seen normally.
- **Urinary bladder** is partially distended with anechoic lumen. No calculus or mass lesion is seen. UB walls are not thickened.
- **Uterus** is atrophic.

OPINION:

- **Mild hepatomegaly with fatty infiltration of liver grade-I.**
- **Bilateral kidneys show renal parenchyma echogenicity with just maintained cortico-medullary differentiation. Adv: RFT correlation.**
- **Small sized right kidney.**

Clinical correlation is necessary.
