

Patient Name	: Mr. MANOJ KUMAR MAURYA	Visit No	: CHA250043233
Age/Gender	: 40 Y O M O D /M	Registration ON	: 10/Mar/2025 03:46PM
Lab No	: 10140528	Sample Collected ON	: 10/Mar/2025 03:46PM
Referred By	: Dr.RBH	Sample Received ON	:
Refer Lab/Hosp	: CHARAK NA	Report Generated ON	: 10/Mar/2025 06:08PM

MRI: BRAIN WITH SCREENING OF SPINE

IMAGING SEQUENCES (NCMR)

AXIAL: SWI, DWI, T1, FLAIR & TSE T2 Wis. **SAGITTAL:** T2 Wis. **CORONAL:** FLAIR Wis.

Cerebral hemispheres show normal MR morphology, signal intensity and gray - white matter differentiation. The basal nuclei, thalami and corpus callosum are showing normal signal intensity pattern. Both lateral ventricles and third ventricle are normal in size shape and outline. Septum pellucidum and falx cerebri are in midline. No mass effect or midline shift is seen. Supratentorial sulcal and cisternal spaces are normally visualized.

Brain stem and cerebellar hemispheres are showing normal morphology, signal intensity and outline. Fourth ventricle is normal in size and midline in position.

No focal or diffuse area of altered signal intensity is seen. No obvious intra/extra-axial space occupying lesion is observed.

Major intracranial dural venous sinuses are showing normal outline and flow void.

Sella, supra-sellar and para-sellar structures are normally visualized.

Deviated nasal septum towards left side is noted.

Mild peripheral mucosal thickening is seen in right maxillary sinus – sinusitis.

Screening of cervical spine was done which reveals early degenerative changes with small disc bulges at C4-5 & C5-6 levels.

IMPRESSION:

No obvious intracranial abnormality is detected.

Please correlate clinically.

DR. RAVENDRA SINGH
