MRCP

IMAGING SEQUENCES (NCMR)

AXIAL: T1, T2 & T2 FS. **CORONAL:** T1 & T2 W images; SSFSE.

Liver is normal in size & MR morphology. Margins are regular. No focal lesion is seen. Portal and hepatic venous channels are within normal limits.

Gall bladder is contracted. Calculus measuring approx 7mm is seen in lumen. No obvious gall bladder wall thickening or mass lesion is seen. No pericholecystic fat stranding or collection is seen. Two calculi (measuring approx 10.8x 8.6mm and ~8x 7mm) are seen in cystic duct. Cystic duct is showing normal insertion.

Biliary system: No intrahepatic biliary radical dilatation is noted. Biliary confluence is patent. Right posterior sectoral duct is seen communication with left hepatic duct. CBD is mildly dilated (measuring 11.5mm in upper part, ~8.9mm in mid part & 5.4mm in distal part) with smooth distal tapering. No obvious intraluminal filling defect/calculus is seen on the base or MIP images. No obvious stricture is seen. Pancreatic duct & common bile duct are opening through a common ampulla at second part of duodenum. No abrupt termination or mass at ampullary region is seen.

Pancreas is normal in size & MR morphology. Margins are regular. Pancreatic duct is not dilated. No focal lesion is observed. No suggestion of pancreatic divisum or chronic pancreatitis is seen. Peripancreatic fat planes clear.

Spleen is normal in size & MR morphology. No focal lesion is observed. Splenoportal axis is normal.

Kidneys: Both kidneys are normal in position and size. No hydronephrosis noted. Visualized upper ureters are normal.

Retroperitoneal major vessels with aortic bifurcation are normal. Celiac axis & superior mesenteric artery are normal. No significant abdominal lymphadenopathy is seen.

No free fluid is seen.

IMPRESSION

- **Cholelithiasis with cystic duct calculi.**
- **Mildly dilated CBD with smooth distal tapering. No CBD calculus is seen.**

Please correlate clinically.
