**CT THORAX**

**HRCT STUDY OF THORAX**

- Heterogeneous, fibrotic, cavitatory & nodular parenchymal opacities are seen in right upper and lower lobes (superior segment). Left lung field is clear and shows normal pulmonary architecture. No evidence of any parenchymal opacity, area of consolidation or any mass lesion is seen in left lung.
- No pleural effusion or pleural thickening is seen on either side.
- No mediastinal lymphadenopathy is seen.
- Trachea is central.
- Heart size is normal.
- Esophagus is seen normally.
- Soft tissues are seen normally.

**OPINION:**

- **HETEROGENEOUS, FIBROTIC, CAVITATORY & NODULAR PARENCHYMAL OPACITIES IN RIGHT UPPER AND LOWER LOBES (SUPERIOR SEGMENT) - MOST LIKELY SEQUELAE OF INFECTIVE PATHOLOGY (?? KOCH'S CHEST).**

**Clinical correlation is necessary.**
