

Patient Name : Ms. SHIVANGI	Visit No : CHA250044143
Age/Gender : 28 Y/F	Registration ON : 11/Mar/2025 06: 45PM
Lab No : 10141438	Sample Collected ON : 11/Mar/2025 06: 47PM
Referred By : Dr. PUNEET MEHROTRA**	Sample Received ON : 11/Mar/2025 07: 05PM
Refer Lab/Hosp : CHARAK NA	Report Generated ON : 11/Mar/2025 08: 16PM
Doctor Advice : CRP (Quantitative)	

Test Name	Result	Unit	Bio. Ref. Range	Method
CRP-QUANTITATIVE				
CRP-QUANTITATIVE TEST	4.4	MG/L	0.1 - 6	

Method: Immunoturbidimetric

(Method: Immunoturbidimetric on photometry system)

SUMMARY : C - reactive protien (CRP) is the best known among the acute phase protiens, a group of protien whose concentration increases in blood as a response to inflammatory disorders. CRP is normally present in low concentration in blood of healthy individuals (< 1mg/L). It is elevated up to 500 mg/L in acute inflammatory processes associated with bacterial infections, post operative conditions tissue damage already after 6 hours reaching a peak at 48 hours. The measurment of CRP represents a useful aboratory test for detection of acute infection as well as for monitoring inflammtory proceses also in acute rheumatic & gastrointestinal disease. In recent studies it has been shows that in apparently healthy subjects there is a direct orrelation between CRP concentrations & the risk of developing oronary heart disease (CHD).

hsCRP cut off for risk assessment as per CDC/AHA

Level	Risk
<1.0	Low
1.0-3.0	Average
>3.0	High

All reports to be clinically corelated
