

Patient Name	: Ms.SHALU SINGH	Visit No	: CHA250044764
Age/Gender	: 31 Y/F	Registration ON	: 12/Mar/2025 04:19PM
Lab No	: 10142059	Sample Collected ON	: 12/Mar/2025 04:19PM
Referred By	: Dr.NEERAJ SRIVASTAV	Sample Received ON	:
Refer Lab/Hosp	: CHARAK NA	Report Generated ON	: 12/Mar/2025 07:56PM

MRI: LUMBO-SACRAL SPINE

IMAGING SEQUENCES (NCMR)

AXIAL: T1 & TSE T2 Wis. **SAGITTAL:** T1 & TSE T2 Wis **CORONAL:** T2

Lumbar spinal curvature is maintained. Vertebral bodies are showing normal height, alignment, curvature and marrow signal intensity pattern. No obvious inflammatory or infective pathology is seen.

Mild posterior disc bulge is seen at L4-5 level causing mild indentation over thecal sac without significant compromise of lateral recess and neural foramina (AP thecal sac diameter 12mm).

Rest of the intervertebral discs and neural foramina are showing normal MR morphology and signal intensity pattern. No significant disc bulge/herniation or compression over thecal sac/spinal cord is seen at other levels.

Lower dorsal spinal cord and conus medullaris are showing normal morphology, outline and signal intensity. Cord CSF interface is normally visualised.

Facet joints and ligamentum flavum are normal.

Pre and para vertebral soft tissues are normal.

Bilateral sacroiliac joints appear normal in the visualized sections.

Screening of rest of the spine was done which reveals small disc bulges at C4-5 & C5-6 levels.

IMPRESSION

Mild disc bulge at L4-5 level.

Please correlate clinically.

DR. RAVENDRA SINGH
