CT WHOLE ABDOMEN

CECT STUDY OF WHOLE ABDOMEN

CT study performed before and after injecting (intravenous) 60ml of non ionic contrast media and oral administration of 20ml contrast media diluted with water.

- **Liver** is markedly enlarged in size (Span 215mm) and shows normal density of parenchyma. No intrahepatic biliary radicle dilatation is seen. Large bizarre shaped hypodense space occupying lesion with mild peripheral enhancement & large non enhancing component is seen in right lobe (segment VII & VI). This space occupying lesion measures 88 x 81 x 70mm (volume 250cc). The residual normal parenchymal thickness measures approx 3mm (along infero-medial aspect). Hepatic veins and IVC are seen normally.
- **Gall bladder** is normal in size and shows normal lumen. No mass lesion is seen. GB walls are not thickened. (CT is not modality of choice for biliary and gall bladder calculi).
- **CBD** is normal at porta. No obstructive lesion is seen.
- **Portal vein** Portal vein is normal at porta.
- **Pancreas** is normal in size and shows homogenous density of parenchyma. PD is not dilated. No parenchymal calcification is seen. No peripancreatic collection is seen.
- **Spleen** is normal in size and shows homogenous density of parenchyma. No SOL is seen.
- **Both Kidneys** are normal in size and position. No hydronephrosis is seen. No calculus or mass lesion is seen.
- **Both Ureters** are normal in course and caliber.
- No retroperitoneal adenopathy is seen.
- **Urinary Bladder** is normal in contour with normal lumen. No calculus or mass lesion is seen. UB walls are not thickened
- Bilateral seminal vesicles appear normal.
- **Prostate** Shows normal density of parenchyma. No mass lesion is seen.
- Thin streak of fluid is seen in right subhepatic, right lumbar & right iliac fossa region.
- Opacified bowel loops are seen normally. No abnormally thickened/edematous bowel loop is seen. No bowel origin mass lesion is seen.

OPINION:

- **MARKED HEPATOMEGALY WITH LARGE BIZARRE SHAPED HYPODENSE WITH MILD PERIPHERAL ENHANCEMENT & LARGE NON ENHANCING COMPONENT - LIVER ABSCESS WITH IMPENDING RUPTURE.**
- **THIN STREAK OF INTRA-PERITONEAL FLUID IN RIGHT SUBHEPATIC, RIGHT LUMBAR & RIGHT ILIAC FOSSA REGION.**

Clinical correlation is necessary.
