### **CECT STUDY OF FACE & NECK**

- *Bilateral tonsillar fossae are slightly bulky with tiny focus of calcification on left side. Mild adenoid hypertrophy is seen. Rest of the nasopharynx and oropharynx are seen normally.*
- Bilateral parotid glands are seen normally.
- Bilateral submandibular glands are symmetrical. No demonstrable differentially enhancing area is seen on present study.
- The aryepiglottic folds and epiglottis are seen normally.
- The valleculae and pyriform sinuses are seen normally.
- The laryngeal airway and cartilages are seen normally.
- Few subcentimetric bilateral cervical lymphnodes are seen.
- Cervical vertebral bodies are normal in size, shape and outline and density. No evidence of any lytic or sclerotic area is seen.
- Thyroid gland is normal in size and density.
- **Note is made of deviated nasal septum towards left side with septal spur impinging upon left inferior nasal turbinate.**

#### **IMPRESSION:**

- **BULKY BILATERAL TONSILLAR FOSSAE WITH MILD ADENOID HYPERTROPHY.**
- **NO OTHER SIGNIFICANT ABNORMALITY DETECTED.**

**Clinical correlation is necessary.**

**(DR. JAYENDRA KUMAR, MD)**
