

Patient Name	: Ms.VIBHA MISHRA	Visit No	: CHA250045802
Age/Gender	: 51 Y/F	Registration ON	: 15/Mar/2025 12:51PM
Lab No	: 10143097	Sample Collected ON	: 15/Mar/2025 12:51PM
Referred By	: Dr.ASHWANI SINGH **	Sample Received ON	:
Refer Lab/Hosp	: CHARAK NA	Report Generated ON	: 15/Mar/2025 01:38PM

MRI: BRAIN

IMAGING SEQUENCES (NCMR)

AXIAL: SWI, DWI, T1, FLAIR & TSE T2 Wis. **SAGITTAL:** T2 Wis. **CORONAL:** FLAIR Wis.

On fiesta sequence –

Bilateral AICA loops are seen abutting canalicular segments of bilateral 7-8th nerve complexes (right > left).

Prominent vascular loop (left superior cerebellar artery) is seen focally abutting cisternal segment of left trigeminal nerve.

Cerebral hemispheres show normal MR morphology, signal intensity and gray - white matter differentiation. The basal nuclei, thalami and corpus callosum are showing normal signal intensity pattern. Both lateral ventricles and third ventricle are normal in size shape and outline. Septum pellucidum and falx cerebri are in midline. No mass effect or midline shift is seen. Supratentorial sulcal and cisternal spaces are normally visualized.

Brain stem and cerebellar hemispheres are showing normal morphology, signal intensity and outline. Fourth ventricle is normal in size and midline in position.

No focal or diffuse area of altered signal intensity is seen. No obvious intra/extra-axial space occupying lesion is observed.

Major intracranial dural venous sinuses are showing normal outline and flow void.

Sella, supra-sellar and para-sellar structures are normally visualized.

IMPRESSION:

- **Bilateral AICA loops abutting canalicular segments of bilateral 7-8th nerve complexes (right > left).**
- **Prominent vascular loop focally abutting cisternal segment of left trigeminal nerve.**

Please correlate clinically.
