Age/Gender	: 22 Y/M	Registration ON	: 15/Mar/2025 03:44PM
<b>Lab No</b>	<b>: 10143266</b>	Sample Collected ON	: 15/Mar/2025 03:44PM
Referred By	: Dr.KGMU	Sample Received ON	:
Refer Lab/Hosp	: CHARAK NA	Report Generated ON	: 15/Mar/2025 04:51PM

**SKIAGRAM CHEST PA VIEW**

- Both lung fields are clear.
- Bilateral hilar shadows are normal.
- Cardiac shadow is within normal limits.
- Both CP angles are clear.
- Soft tissue and body cage are seen normally.
- Both domes of diaphragm are sharply defined.

**OPINION**

- **NO ACTIVE LUNG PARENCHYMAL LESION IS DISCERNIBLE.**

**Clinical correlation is necessary.**

**CT ANGIOGRAPHY OF LEFT UPPER LIMB**

*HPE proven case of Rhabdomyosarcoma post chemotherapy status showing:*

- Well-defined lobulated heterogeneously enhancing soft tissue attenuation mass lesion measuring approx.125x100x189mm is noted in intermuscular compartment predominantly on dorsal aspect of mid and distal arm and with extension on antero-lateral aspect. Multiple non enhancing cystic areas are seen within the lesion. The lesion is abutting the shaft of humerus without osseous erosion. The lesion is supplied by arterial feeders from the brachial artery. The lesion is abutting the medial head of biceps and triceps muscles with loss of interface without obvious infiltration.

**IMPRESSION: - HPE PROVEN CASE OF RHABDOMYOSARCOMA POST CHEMOTHERAPY STATUS SHOWING:**

- WELL-DEFINED LOBULATED HETEROGENEOUSLY ENHANCING SOFT TISSUE ATTENUATION MASS LESION IN INTERMUSCULAR COMPARTMENT PREDOMINANTLY ON DORSAL ASPECT OF MID AND DISTAL ARM AND WITH EXTENSION ON ANTERO-LATERAL ASPECT WITH FEATURES AND EXTENSION AS DESCRIBED.....RESIDUAL LESION.

Clinical correlation is necessary.
