CT WHOLE ABDOMEN

CECT STUDY OF WHOLE ABDOMEN

- **Liver** is enlarged in size (Span 176mm) and shows normal density of parenchyma. No intrahepatic biliary radicle dilatation is seen. Multiple cystic lesions of various sizes and shapes are seen along liver surface in right lobe, largest measuring 56 x 39 x 37mm. Hepatic veins and IVC are seen normally.
- **Gall bladder** is normal in size and shows normal lumen. No mass lesion is seen. GB walls are not thickened. (CT is not modality of choice for biliary and gall bladder calculi, USG is advised for the same).
- **CBD** is normal at porta. No obstructive lesion is seen.
- **Portal vein** Portal vein is normal at porta.
- **Pancreas** is normal in size and shows homogenous density of parenchyma. PD is not dilated. No parenchymal calcification is seen. No peripancreatic collection is seen.
- **Spleen** is normal in size and shows homogenous density of parenchyma. No SOL is seen.
- **Both Kidneys** are normal in size and position. No hydronephrosis is seen. No calculus or mass lesion is seen.
- **Both** ureters are normal in course and calibre.
- Few enlarged & subcentimetric retroperitoneal nodes are seen, largest measuring 18 x 10mm.
- Massive ascites is seen.
- **Urinary Bladder** is normal in contour with normal lumen. No calculus or mass lesion is seen. UB walls are not thickened.
- **Uterus** is normal in size and shows homogenous myometrial density. No endometrial collection is seen. Calcification is seen abutting urine cavity. No space occupying lesion is seen.
- **Cervix** is normal.
- Left adnexa shows a large cystic-solid space occupying lesion. The lesion shows septations and enhancing solid component and extends upto lower abdomen. This space occupying lesion measures 157 x 135 x 118mm in size. Similar cystic-solid space occupying lesion is seen in right lumbar region extending upto right iliac fossa. This space occupying lesion measures 126 x 98 x 129mm in size. Both ovaries are not seen separately.
- Opacified bowel loops are seen normally. No abnormally thickened / edematous bowel loop is seen. No bowel origin mass lesion is seen.

IMPRESSION:

- MILD HEPATOMEGALY WITH MULTIPLE CYSTIC LESIONS OF VARIOUS SIZES AND SHAPES ALONG LIVER SURFACE IN RIGHT LOBE.
- MASSIVE ASCITES.
- BILATERAL LARGE CYSTIC SOLID SEPTATED SPACE OCCUPYING LESIONS IN LOWER ABDOMEN AS DESCRIBED --- BILATERAL OVARIAN NEOPLASMS.
- FEW ENLARGED & SUBCENTIMETERIC RETROPERITONEAL NODES.

Clinical correlation is necessary.
