CT THORAX

CECT STUDY OF THORAX, ABDOMEN AND PELVIS

CECT THORAX

- Multiple tiny soft nodules (>10 in number) are seen in both lungs, measuring 2mm to 4mm. No evidence of any other parenchymal opacity, area of consolidation or any larger mass lesion is seen.
- No pleural effusion or pleural thickening is seen on either side.
- No mediastinal lymphadenopathy is seen.
- Trachea is central.
- Great vessels are seen normally.
- Heart size is enlarged.
- Esophagus is seen normally.
- Visualized portion of bones are seen normally.
- Soft tissues are seen normally.

CECT ABDOMEN AND PELVIS

- **Liver** is enlarged in size (Span 164mm) and shows multiple less enhancing & heterogeneously enhancing space occupying lesions of various sizes, largest measuring 33 x 30mm. Minimal central intrahepatic biliary radicle dilatation is seen. Hepatic veins and IVC are seen normally.
- **Gall bladder** (History of surgery).
- **CBD** Proximal C.B.D measures 6mm at porta. No obstructive lesion is seen.
- **Portal vein** Portal vein is normal at porta.
- **Pancreas** is normal in size and shows homogenous density of parenchyma. PD is not dilated. No parenchymal calcification is seen. No peripancreatic collection is seen.
- **Spleen** is normal in size and shows homogenous density of parenchyma. No SOL is seen.

- **Both Kidneys** are normal in size and position. No hydronephrosis is seen. No calculus or mass lesion is seen. Right kidney shows tiny cortical cysts, largest measuring 9 x 9mm.
- **Both** ureters are normal in course and calibre.
- Multiple enlarged retroperitoneal nodes are seen, largest measuring 21 x 18mm.
- No ascites is seen.
- **Urinary Bladder** is normal in contour with normal lumen. No calculus or mass lesion is seen. UB walls are not thickened.
- **Uterus** is absent (History of surgery).
- No adnexal mass lesion is seen.
- Opacified bowel loops are seen normally. No abnormally thickened / edematous bowel loop is seen. No collection is seen. No bowel origin mass lesion is seen.

OPINION:

FUC OF METASTATIC NEUROENDOCRINE TUMOR. PRESENT CT STUDY SHOWS:-

- MULTIPLE TINY LUNG NODULES - METASTASIS.
- MILD CARDIOMEGALY.
- HEPATOMEGALY WITH EXTENSIVE LIVER METASTASIS.
- RETROPERITONEAL LYMPHADENOPATHY.
- MINIMAL CENTRAL I.H.B.R.D.
- TINY RIGHT RENAL CORTICAL CYSTS.

Clinical correlation is necessary.
