

Patient Name : Mr.MOHD SADIO Visit No : CHA250047077
Age/Gender : 24 Y/M Registration ON : 17/Mar/2025 12:53PM
Lab No : 10144372 Sample Collected ON : 17/Mar/2025 12:53PM
Referred By : Dr.AHMAD AYZ** Sample Received ON :
Refer Lab/Hosp : CHARAK NA Report Generated ON : 17/Mar/2025 03:30PM

MRI: CERVICAL SPINE

IMAGING SEQUENCES (NCMR)

AXIAL: T1 & T2 Wis. **SAGITTAL:** T1 & TSE T2 Wis. **CORONAL:** T2 Wis.

Cervical spinal curvature is maintained. All the visualized intervertebral discs are dessicated. Vertebral bodies are showing normal height and marrow signal intensity pattern.

Mild posterior disc bulges are seen at C3-4, C4-5, C5-6 and C6-7 levels causing mild indentation over thecal sac without significant compromise of lateral recess and neural foramina.

Rest of the thecal sac with spinal cord is normal in signal intensity and configuration. Cord CSF interface is normally visualized. No intramedullary or intradural pathology is seen.

No evidence of any osseous or soft tissue anomaly at cranio-vertebral junction.

Pre and para-vertebral soft tissues are normal.

AP thecal sac diameter at disc level measures:

| C2-3 | C3-4 | C4-5 | C5-6 | C6-7 | C7-D1 |
|------|------|--------|--------|--------|--------|
| 13mm | 11mm | 10.7mm | 10.3mm | 10.2mm | 10.8mm |

Screening of rest of the spine was done which reveals minimal spondylolisthesis with disc bulge at L5-S1 level.

IMPRESSION:

- Mild disc bulges at C3-4, C4-5, C5-6 and C6-7 levels.

Please correlate clinically.
